

**Pressure Test Pump LR-Cal LPP 700**

- manually operated, for mineral oil or clean distilled water
- pressure source up to 10,000 psi (700 bar)
- including test hose ("MINIMESS")
- suitable for hydraulic liquids on the basis of mineral oil or for distilled water

The Pressure Test Pump LR-Cal LPP 700 is used to generate pressure for checking, adjusting and calibrating mechanical and electronic pressure measuring instruments by comparative measurements. These pressure tests may be carried out in laboratories, workshops or directly on-site at the measuring point.

If the instrument under test and a sufficiently accurate reference measuring instrument are connected to the LR-Cal LPP 700, the same pressure is applied to both instruments when the pump is operated.

Despite to its compact dimensions, the Pressure Test Pump LR-Cal LPP 700 is easy to operate and allows for exact generation of the required test pressures. The LR-Cal LPP 700 is fitted with a fine adjustment valve for the precise adjustment of pressures. The reference instrument is screwed on top of the pump and the unit under test is connected by means of a connection tube incorporating an adapter 1/4 BSP rotating female port (see optional accessories for different suitable adapters if necessary).
